EXPERIENCES

AI Trainer

Outlier

Remote, UK

08/2024 - Present

- Freelance AI trainer contributing to the optimisation and evaluation of AI models.

IT Specialist

Jobwise HR Solutions Ltd.

Tainan, Taiwan

06/2023 - 09/2023

- Successfully implemented a new CRM system for the working holiday application process, improving sales workflow efficiency using Agile methodology.
- Performed ad hoc and user acceptance testing (UAT) to ensure data accuracy, system accessibility, and a streamlined application process, iterating based on feedback.
- Created comprehensive documentation for training purposes and evaluated system performance in weekly meetings with the CRM provider post-implementation, fostering continuous improvement.

Interactive Production Team Leader

360Fashion Network

Remote, USA

10/2021 - 03/2022

- Led and collaborated with team members to complete 4 AR and VR productions, which enhanced user interaction with fashion products.
- Led the launch and streamlining of a new fashion tech news service through various multimedia formats, attracting nearly 200 newsletter subscribers and achieving a 2% weekly increase in podcast audience.
- Collaborated with the M5Stack team to test and debug IoT-enhanced fashion products, improving functionality and user experience.

Fashion Technology Intern

360Fashion Network

Remote, USA

08/2021 - 09/2021

- Assisted in delivering the "Python Basics for AI & Robotics" course at Popular Robotics and help team members in obtaining their certification.
- Utilised MarketMuse and its AI tools for SEO optimisation to enhance the performance of social media content.
- Leveraged WeChat Public Accounts Platform to post Chinese content, expanding reach to potential users.

PROJECTS

Connect.edu - Automated Matching System

- An automated matching system developed for study abroad agencies providing global educational services. It pairs students with the most suitable agents based on adjustable preset conditions, tailored to meet specific requirements.
- [Django](#)-based backend integrated with a [Vue.js](#) frontend.

Guardians of the Forest - 3D Tower Defense Game

- A 3D Tower Defense game using [Unity](#) and [C#](#).

Cryptocurrency Trading Platform Simulator

- Developed the backend and database using [PHP](#) and [MySQL](#), and designed an enhanced user interface with [HTML](#) and [CSS](#).

Automatic Plant-Watering System

- Developed an IoT solution that monitors soil moisture and temperature, triggering the [Arduino](#) system when specific conditions are met.
